SUMMARY

Motivated Full Stack Development Engineer with hands-on experience in designing and building scalable web applications using Java, Node.js, React, MySQL and MongoDB. Strong foundation in Data Structures & Algorithms, Object-Oriented Programming, DBMS, and Operating Systems. Experienced in developing RESTful APIs, authentication systems, and full-stack applications. Proficient with Git, Docker, and Agile development practices. Passionate about problem-solving, clean architecture, and building efficient, high-performance systems.

EXPERIENCE

AI Intern

01/2025

IBM PEBL

Moradabad, Uttar Pradesh

- Developed AI-driven applications using machine learning and data analysis techniques
- Designed and implemented models for classification/prediction, improving performance through tuning
- Integrated AI models into applications via APIs and backend services
- Applied concepts of data structures, algorithms, and statistics in model optimization
- Worked in a collaborative Agile environment, contributing to code reviews and project delivery
- Improved system efficiency and decision-making using data-driven insights

EDUCATION

Bachelor of Technology in Computer Science (BTech-CSE) in

Collaboration with IBM

Teerthankar Mahaveer University

08/2023 - 05/2027

Moradabad

PROJECTS

PROJECT 1: Auth System & Task Management API

Tech Stack: Node.js, Express.js, PostgreSQL, JWT, Docker, React, Tailwind CSS

GitHub: <https://github.com/satwik12dev/Auth-System-Task-API.git>

- Developed a scalable RESTful API for authentication and task management with secure user workflows.
- Implemented JWT-based authentication (access + refresh tokens) with secure session handling and route protection.
- Designed a modular backend architecture (controllers, middleware, services) improving maintainability and scalability.
- Optimized database queries using PostgreSQL, improving response performance.
- Containerized the application using Docker, ensuring consistent deployment across environments.
- Implemented core features including task CRUD operations, user management, and protected APIs.

PROJECT 2: Resume Analyzer (Full Stack AI Project)

Tech Stack: Node.js, React.js, Gemini API (AI Integration)

GitHub: <https://github.com/satwik12dev/Gen-AI-Resume-Analyzer.git>

- Developing a full-stack AI-powered resume analysis platform to evaluate and improve resume quality.
- Built backend APIs to parse resumes and extract structured data (skills, experience, keywords).
- Integrated AI models for resume scoring, feedback generation, and skill matching.
- Designed a responsive UI for resume upload and real-time analysis results.
- Focused on solving a real-world problem in job screening and resume optimization.

PROJECT 3: File Hider App (Java-Based Security Application)

GitHub: <https://github.com/satwik12dev/File-Hider.git>

Tech Stack: Java, JDBC, MySQL, Javax mail, SMTP (Simple Mail Transfer Protocol)

- Developed a secure file encryption application to hide and retrieve sensitive files (images/documents).
- Implemented role-based authentication using JDBC and MySQL for secure access control.
- Designed efficient file handling to ensure fast retrieval time (<2 seconds).
- Applied encryption techniques to ensure data privacy and integrity.
- Built and tested using IntelliJ IDEA, ensuring reliable data recovery and system stability.

KEY ACHIEVEMENTS

Project Development Achievements

- Increased application performance by up to 55% using optimized database queries.
- Built secure file storage system with 100% privacy-preserved encryption.
- Contributed to team Agile development, improving project delivery speed by 35%.

SKILLS

Languages: Java, JavaScript

Frontend: HTML, CSS, React.js, Tailwind CSS

Backend: Node.js, Express.js

Databases: MySQL, MongoDB, Firebase, PostgreSQL

Tools & Technologies: Git, GitHub, Docker, Linux, IntelliJ IDEA, VS Code, Power BI, N8N

Core Concepts: Data Structures & Algorithms, Object-Oriented

Programming (OOPs), Operating Systems, Agile Methodology, System Design

INTERESTS & STRENGTHS

Strengths

Problem Solving, Analytical Thinking, System Design Approach, Debugging & Optimization, Team Collaboration

Interests

Backend Development, Scalable Systems, AI/ML Applications, Building Real-World Projects

Certifications

- AWS Cloud Practitioner Essentials
- IBM Java Programming Certification
- GUVI Python Programming Certification
- Cloud Fundamentals, Big Data & RDBMS Concepts
- NPTEL – Computer Architecture
- PEBL Internship & Training Certification by IBM.

RESPONSIBILITIES & LEADERSHIP

- Led project development and collaborated with team members during academic and internship projects.
- Managed documentation, task coordination, and project delivery timelines.
- Participated in Agile sprint planning and code reviews, ensuring quality and timely completion.
- Assisted peers in debugging, version control usage, and technical problem-solving.

LANGUAGES

English Intermediate
